

KEYSOURCE DELIVERS LIVE CRITICAL UPGRADE

SERVICES DELIVERED

- ✓ LIVE CRITICAL UPGRADE
- ✓ FULL PROJECT MANAGEMENT
- ✓ RIBA LED DESIGN
- ✓ INTEGRATION

ABOUT THE PROJECT

A leading provider of technology solutions to the education and public sector, chose KeySource, the data centre specialists, to undertake a critical upgrade at its HQ, that is also its Technology Manufacturing Hub and Fully Secure ITAD Facility. The upgrade, designed to provide increased resilience, was successfully completed in live data centre, working around live infrastructure, without any disruption.

KeySource delivered a live upgrade project that focussed on protecting the critical IT assets and essential services run from the data centre. This included a new gaseous fire suppression and highly sensitive smoke detection system. As this is a sensitive, secure facility with onsite technology manufacturing and disposal, KeySource had the relevant security credentials to deliver a complete managed service including full project management, supervision, RIBA led design and integration.

CLIENT QUOTE

"I can't praise Keysource enough, a thorough meticulous approach coupled with a great team ensured this project was delivered seamlessly without disruption.

I didn't hesitate to engage them for this critical project as with their security credentials, ISO9001 processes, inhouse engineering capabilities and approach to delivering this as a fully managed project."

IT Manager

KEYSOURCE QUOTE

"Keysource excel in the delivery of complex, and critical live datacentre projects within secure environments.

Our success on this project testament to the expertise and experience of our inhouse team and tried and tested approach. We look forward to building our relationship with Stone Group moving forward."

Richard Clifford, Director of Solutions
